PROFESSIONAL SUMMARY

Software Engineering undergraduate building a foundation in DevOps practices, with hands-on exposure to Docker, Linux, and virtual machines through academic and personal projects. Completed AWS training in continuous integration/deployment workflows, automated processes, and infrastructure management, complemented by cloud database administration experience through MongoDB Atlas. Combines full-stack development background across frontend, backend, and database integration with a growing interest in build automation, version control workflows, and collaborative, reliable software delivery.

PROJECTS

Boodima.lk — Student & Tenant Accommodation Platform | React, Node.js, Express, MongoDB, JWT

- Engineered a full-stack MERN application with 12+ RESTful API endpoints, enabling students and working professionals to search, filter, and book boarding accommodations
- Deployed the platform on Vercel, making it accessible as a live, hosted web application
- Delivered a real-time chat and date-based booking system, populated with 50+ sample listings across 5+ locations for demo purposes

Boodima.lk *Boodima.lk*

Smart Campus — Campus Resource Sharing Platform | React, Spring Boot, JWT, OAuth

- Developed a full-stack Spring Boot and React application with 15+ REST endpoints, enabling booking of shared resources like rooms, projectors, and cameras
- Implemented OAuth and JWT authentication supporting 3+ user roles with distinct access permissions, verified through role-based access checks
- Stocked the system with 20+ bookable resources across 5+ resource categories for demo purposes

Smart Campus *Smart Campus*

Cool Cart — B2B Ice Cream Ordering Platform | React, Node.js, Express, MongoDB

- Architected a full-stack MERN platform with 25+ API endpoints supporting product browsing, cart, and order management for shop owners
- Curated a product catalog populated with 30+ sample ice cream products across multiple categories
- Built and assessed a cart and checkout flow across 10+ mock shop owner accounts

Cool Cart

Kitchen Chaos — 3D Unity Cooking Game | C#, Unity

- Created a single-player 3D cooking game in Unity featuring 4+ interactive cooking stations
- Leveraged Scriptable Objects to manage 10+ data-driven recipes, decoupling data from gameplay logic
- Programmed event-driven systems (C# event handlers, Lists) to manage order generation and scoring across 5+ order types

Kitchen Chaos *Kitchen Chaos*

Snake Multiplayer — 2D Unity Multiplayer Game | C#, Unity, Netcode / Network Manager

- Built a real-time multiplayer game in Unity (C#) supporting 4+ concurrent players per session over local network testing
- Structured the codebase using OOP principles (inheritance, interfaces) across 8+ modular C# scripts
- Synchronized player movement and game state in real time using Unity's Network Manager, verified across 5+ local sessions

Snake Multiplayer *Snake Multiplayer*

Habit Tracker — Android Mobile App | Kotlin, Android Studio

- Configured a native Android habit tracker app in Kotlin supporting creation and tracking of unlimited daily habits
- Enabled local data persistence, evaluated across 15+ sample habit entries
- Refined a clean UI for logging habit completion and viewing progress over time

Game Hub — Mobile UI/UX Design | Kotlin, Android Studio

- Crafted a native Android UI/UX concept in Kotlin spanning 8+ custom-designed screens inspired by the Xbox app
- Constructed a dark-themed interface with 5+ custom UI components for a console-quality visual experience
- Organized navigation across 4 core app sections (library browser, activity feed, achievements, dashboard)

Game Hub

Reality Show Voting System — Real-Time Voting Platform | PHP, MySQL, HTML, CSS

- Collaborated in a 5-member Agile team over a multi-sprint cycle to build a real-time voting platform
- Contributed data integrity checks, confirmed through 100+ simulated votes for accurate real-time counting

EDUCATION

BSc (Hons) in Information Technology

Sri Lanka Institute of Information Technology (SLIIT)
Nov 2023 – Present

G.C.E. Advanced Level – Engineering Technology Stream

Mo/Obbegoda secondary school
2017 – 2020

TECHNICAL SKILLS

DevOps/Cloud

- Docker, AWS, CI/CD, Linux

Programming Languages

- C, C++, C#, Java, JavaScript, Kotlin, Python

Frontend Technologies

- React.js, HTML5, Tailwind CSS

Backend Technologies

- Node.js, Express.js, Spring Boot

Databases

- MongoDB, MSSQL, MySQL, Oracle

IDEs:

- VS Code, Eclipse, IntelliJ Idea

Test Automation: Playwright

API Testing: Postman

Project Management Tools: Jira, Trello

Version Controlling: GitHub, Git

Others: Photoshop, Figma, Canva, Unity6

SOFT SKILLS

- Database Schema Design
- Debugging & Root Cause Analysis
- Technical Documentation
- Version Control & Code Review
- Teamwork and Collaboration
- Effective Communication of Insights

COURSES

Getting Started with DevOps on AWS - AWS Training & Certification

- Finished a foundational AWS course focused on continuous integration/deployment workflows, automated processes, and infrastructure management.

Python for Beginners - Centre for Open & Distance Learning (CODL), University of Moratuwa, Sri Lanka

- Completed an online learning programme in Python fundamentals, conducted by the Department of Computer Science & Engineering, Faculty of Engineering.

Web Design for Beginners - Centre for Open & Distance Learning (CODL), University of Moratuwa, Sri Lanka

- Gained foundational skills in web design through an online programme delivered by the Department of Information Technology, Faculty of Information Technology.

MongoDB Atlas Administrator Path - MongoDB University

- Successfully completed training in MongoDB Atlas administration, database management, security, monitoring, and cloud deployment.
